

Table I.

Characteristics of patients examined with deferred routine CT KUB after a self-limiting episode of urolithiasis.

All participants	Total	Women	Men
Patients, n (%)	189 (100)	79 (42)	110 (58)
Age, yr, median (mean)	55 (55.4)	55 (55.0)	57 (55.7)
Range	18-89	19-89	18-84
Previous known urolithiasis^a, n (%)	80 (42)	31 (39)	49 (45)
Haematuria^b, n (%)	109 (58)	49 (62)	60 (55)
Duration of symptoms at referral, days, median (mean)	1 (3.3)	2 (3.7)	1 (3.1)
Range	1-20	1-19	1-20
Days from referral to time for CT, median (mean)	23 (30.2)	25 (31.2)	22 (29.5)
Range	1-106	3-106	1-105

^a Missing information in 67 (35%) cases, defined as not having a history of urolithiasis in calculation of percentage.

^b Missing information in 59 (31%) cases, defined as not having haematuria in calculation of percentage.
